SUMMARY

- Microsoft certified professional with around 3.10 years of experience on Microsoft Dynamics 365.
- Experienced in building GOV.UK & WCAG-compliant Power Portal interfaces
- Having good hands-on experience in integrating D365 with External Systems.
- Have expertise in Implementing Security modules.
- Good experience in the development of Plugins, Workflows, Custom Actions, Power Automate Flows, and Web API.
- Have worked closely with the clients to understand the requirements and provided a demo as necessary.
- Handled migrating a decent amount of Data across environments using Pipeline.
- Manual & Automated Deployment of CRM across different environments.
- Good knowledge of Solution Management (Managed and Unmanaged).
- Worked on writing Unit Test Cases for Plugins, Workflows and JavaScript and maintained code quality using SonarQube.
- Handled the development of Power Apps Portal using Liquid JS, along with the integrations of Blob and SharePoint to store the generated PDFs for vehicle test user Applications

CERTIFICATIONS

- PL-900 Microsoft Power Platform Fundamentals
- PL-200 Microsoft Power Platform Functional Consultant Associate
- PL-400 Microsoft Power Platform Developer

COMPANY EXPERIENCE

Name: Kerv Digital (formerly clothing India Private

Designation: Software Engineer – CRM (Aug 2022 – Present)

PROJECTS

Title: **Driver Service Platform (DSP)**

January 2026 – Present

Client: Driver & Vehicle Standards Agency (DVSA) & KAINOs

Description: The DSP (Driving Services Platform) project is a key initiative within the DVSA Services Transformation Program, focused on modernizing and improving the delivery of driving test and wider driver services across Great Britain. The program aims to provide customers with driving tests that better suit their needs by increasing flexibility, improving availability, and supporting varied delivery models. It also addresses the reduction of misuse by third-party booking services, enabling fairer access for genuine customers. The project supports more effective resource management to optimise operational capacity, enhances both customer and internal user experience, and promotes greater self-service capabilities to streamline processes and improve efficiency across DVSA services.

Title: **Commercial Vehicle Services (CVS) – Approvals Transformation Implementation (ATI)**

August 2023 – December 2025

Client: Driver & Vehicle Standards Agency (DVSA) & BJSS

Description: The objective of CVS is to replace legacy IT systems that support the Vehicle Testing Service, enabling the exit of a long-standing IT contract while enhancing the overall service for users and customers. By transitioning from manual, paper-based processes to a responsive digital system aligned with the ATF service delivery model, the project aims to modernize digital solutions, reduce errors, and improve the timeliness of test data through PowerApps Portal with a security-aligned user experience by automating the process by including the Smart Forms. This ensures better capacity to prevent non-roadworthy vehicles from operating, thereby improving road safety. Customer benefits include online services, streamlined payment processes, and greater transparency in test information.

Contribution:

- Redesigned existing functionality by removing redundant components to optimise application performance and usability.
- Performed extensive customisations on Dynamics 365, transitioning from traditional plugins to Power Automate Flows to streamline processes.
- Developed and deployed portal web pages, resulting in 20% improvements in error handling and improving application performance by 30%
- Integrated PowerApps Pages (Power Portals) to provide external users with seamless access like SharePoint & Blob storage to critical application services and test information.
- Implemented the best Liquid JS logic in place for handling the Smart Forms of an Application for a seamless user experience on portals digitalizing the quality vehicle test process online.
- Handled the creation of PDF generation from a Word doc template and attaching it to SharePoint through Power Automate flows, along with sending emails to customers on the status of the applications
- Implemented unit testing frameworks for plugins, workflows, and JavaScript to ensure code reliability and maintainability.
- Focused on designing and reviewing technical approaches, collaborating closely with the team to ensure alignment with best practices and client requirements

Title: **Institute of Chartered Accountants in England and Wales (ICAEW)**

August 2022 – June 2023

Client: ICAEW

Description: The Institute of Chartered Accountants in England and Wales (ICAEW) is a globally recognized professional membership organisation that supports and regulates chartered accountants and students across more than 150 countries. Established by Royal Charter in 1880, ICAEW has played a pivotal role in shaping the accounting profession by promoting high standards of professionalism, ethics, and technical excellence. With over 210,000 members and students worldwide, ICAEW advances the theory and practice of accountancy, finance, business, and commerce through rigorous qualifications, continuous professional development, and thought leadership. As a recognized supervisory and regulatory body under UK law, ICAEW ensures compliance with professional and ethical standards while collaborating with international accounting organizations to strengthen the global accountancy profession and enhance the credibility and impact of its members.

Contribution:

- Responsible for customisation of CRM using Plugins, Workflows, Actions, etc.
- Implemented Unit Testing for Plugins / Workflows and JS.
- Handled the ribbon button customisation using JS to various requirements.
- Deployment of CRM as well as PowerApps Components.
- Responsible for creating Power Automate Flows.
